Study the Fine Points of Case IH Cutting Parts' Quality

TOP-SERRATED, UNDER-SERRATED OR SMOOTH

Here, an evolution is taking place. The Case IH coined, top-serrated design controls the movement of abrasive material, creating visible wear lines from the serrations on one cutting edge to corresponding serrations on the opposite cutting edge (see inset). By diverting much of the wear from the points of the teeth to the bottoms of the "V", teeth retain shape and sharpness even though the section has worn farther than the depth of the original serrations. Under-serrated sections must be hand sharpened to retain their original profile. Smooth sections are the old standby for fine, grassy and wiry conditions.

BLACK OR ZINC PLATING

Black versus zinc plating — which is best? Both are good and Case IH will continue to offer both, but the performance gap between the two is growing smaller. Originally, superior durability gave the zinc plated section a marked advantage in abrasive soil, despite its higher price. Today, that advantage still exists, but the self-sharpening, reshaping action of the coined top-serrated design has added many hours and acres of useful life to the black section, making it the better value under a wider range of conditions.

STANDARD, STA SHARP OR SUPER STA SHARP SERRATIONS

There's a place for each type. Case IH STA Sharp serrated sections have grown in popularity for particular field conditions. With 9- or 13-deep serrations per inch, instead of 14, STA Sharp serrated sections are especially efficient for harvesting coarse, dry-stemmed crops. However, the standard (14-per-inch serrations) sections are more versatile and the better choice for most conditions.

BACK-HARDENED SECTIONS

The back edge of all Case IH sickle sections is hardened to the same degree as the mating surface of the guard or wearplate. In addition to superior durability, this assures an even rate of wear between the two mating surfaces and eliminates the need for frequent adjustment.

DISC MOWERS/MOWER CONDITIONERS/WINDROWERS

SECTIONS & GUARDS

GUARDS

- Kits include guards, hold-down clamps, shims and hardware
- A knife is not included – knives are available Case IH with different type sections to best match cutting requirements
- OE component
- One box, one part number, one price

PART NUMBER	APPLICATION
87298413	SMX91
87298419	HDX142
87298420	HDX162
87298421	HDX182

- A** Case IH employs high industry standards using a special heat treatment on the back bar to reduce wear between the guard and the section.
- B** Case IH applies an additional induction-hardening process to the trash bar as well. This maintains a more durable surface for peak performance and long service life.
- C** Case IH applies an additional induction hardening process to the ledger areas to provide a longer wear-sharp surface for more efficient cutting. These ledger areas are also wider for additional service life.

Today's machines have increased cutting demands. Made for durability and longer service life, Case IH guards provide top performance in all harvest conditions.

DISC MOWERS/MOWER CONDITIONERS/WINDROWERS

DISC MOWER KNIVES

We Own the Cutting Edge

Case IH Mower Knives are superb quality disc mower knives. They boast a number of design features that help them cut smoother, last longer and operate more safely than other knives. Furthermore, each and every production lot is subjected to a rigorous battery of tests to ensure performance standards are met. Each knife bears a stamped Traceable Sequential Lot Number, a unique number that permits tracing the knife back through all of its manufacturing processes.

Manufactured for Maximum Performance

From raw material specification to the last production process, extra care has been taken to assure optimum performance and durability.

- The cutting edge is milled, not rolled, for improved sharpness. The milled edge does not extend past the bolt holes, for increased strength.
- The new, radial-twist design improves lifting action for a smoother cut.
- Disc knives are austempered for better impact absorption.
- Knives are available in 3, 4 or 5 mm thicknesses with bevel-up, bevel-down or bevel-opposite knife styles.

Traceable Sequential Numbering System Confirms Our Commitment to Do It Right

Every production lot is tested against ISO specifications, then the manufacturing and testing processes are verified by stamping a traceable sequential number on each knife. In addition, tests are performed to satisfy standards set by Case IH – standards that exceed ISO requirements.

- Incoming material is inspected, then tagged for traceability.
- Bend tests are performed to guard against cracking.
- Impact tests are used to check structural integrity.
- Cross section analysis assures optimum metallurgical grain structure.

Our Disc Mower Knives are manufactured in three thicknesses for light, medium and heavy-duty applications.

The new radial-twist design extends down and across the central area of the blade for better lifting action. For more information on rotary disc mower knives, refer to PM-16524.

Cross sections are examined under a microscope for proper grain pattern.

Bend tests are performed on each production lot to determine if cracks are present.

Impact tests check the knives' ability to flex and absorb shock and not shatter into pieces should they hit obstructions.

DISC MOWERS/MOWER CONDITIONERS/WINDROWERS

ROTARY DISC MOWER BLADE SELECTION

DISC MOWER KNIFE WITH HARDWARE IN HANDY SERVICE PACKS

Application: Disc Mowers: DCX101, DCX131, DCX132, DCX161 with lifters; Windrower Heads: RDX161, RDX162, RDX181 with lifters

PART NUMBER	DESCRIPTION/TYPE PITCH/ROTATION
87298470	7° Twist CW
87298471	7° Twist CCW
87298469	14° Twist CCW
87298466	14° OS (Serrated) CW
87298472	"V" Rock Blade

PART NO. 87298472

DISC MOWERS/MOWER CONDITIONERS/WINDROWERS

ROTARY DISC MOWER BLADE SELECTION

7° TWIST KNIVES

The 7° twist knives are recommended for abrasive soil and rocky crop cutting conditions. These knives function well in a wide range of field and cutting conditions.

PART NUMBER	DESCRIPTION/TYPE PITCH/ROTATION
9847683	Knife – 7° Twist CW
9847684	Knife – 7° Twist CCW

18° KNIVES

The 18° twist knives are standard on RD163 and RD193 self-propelled windrower heads. The 18° twist provides for a close cut and high lift for superior material flow.

PART NO. 84271203

PART NUMBER	DESCRIPTION/TYPE PITCH/ROTATION
84271203	Knife – 18° Twist CW
84271205	Knife – 18° Twist CCW

14° TWIST KNIVES (STANDARD EQUIPMENT) & 14° TWIST SERRATED KNIVES

The 14° twist knives are recommended for most crop conditions. The greater twist angle enables the knife's cutting edge to cut closer to the ground and provide more lifting action to move the crop over the cutter bar into the conditioner, producing a cleaner cut. The greater twist angle in these knives makes them more susceptible to rock damage.

STANDARD

SERRATED

PART NUMBER	DESCRIPTION/TYPE PITCH/ROTATION
86621872	Knife – 14° Twist CW
86621873	Knife – 14° Twist CCW
87029587	Knife – 14° Twist OS CW
87029588	Knife – 14° Twist OS CCW

7°KNIVES

The 7° twist knives are available for the RD163 and RD193 self-propelled windrower heads. These knives function well in a variety of crop conditions and are less susceptible to rock damage.

PART NO. 84343225

PART NUMBER	DESCRIPTION/TYPE PITCH/ROTATION
84343225	Knife – 7° Twist CW
84343226	Knife – 7° Twist CCW

“V” ROCK BLADE KNIVES

The “V” knives are recommended for operation in rocky conditions where excessive knife bending is a concern. This style knife has greater resistance to bending when coming in contact with a foreign object. The cutting quality of this knife is not as good compared to the twisted knives.

Part No. 86532078

DEALER INSTALLED ACCESSORIES

WIDE THIN FIN KIT

Application: DC102, DC132, DC162 Disc Mower Conditioners

- The wide, thin fin kit allows the crop windrow to be spread 90% to 100% of the cutting width. This speeds the crop dry-down, decreasing the risk of rain damage to the crop. Also, fast dry-down reduces energy consumption by respiration, thus improving feed value.

87298975	5-Pack
87298976	6-Pack
87298981	7-Pack
87298982	8-Pack

THE COST OF A FILTER GOES BEYOND WHAT YOU PAY FOR IT

A filter's purpose is to extend the life of your equipment by protecting it from harmful contaminants. Lower-quality filters may save you some money at the counter, but their inferior protection can cost you greatly in the long run.

The smallest particles are often the most damaging. Many will-fitters miss these fine particles, which results in gradual damage that often goes unnoticed – until it's too late.

Case IH filters offer advanced design and durable construction that is rigorously tested by CNH Engineering to ensure you get the best heavy-duty protection for your equipment.

THE HEAVY DUTY DIFFERENCE:

1. SUPERIOR MEDIA

Synthetic, multi-layer, gradient density media outperforms competitive cellulose and paper media 2-to-1.

2. TWO-STAGE DESIGN

Additional stacked-disc section removes the finest contaminant particles that can cause the most engine wear.

3. HOT MELT

This high-quality adhesive keeps filter media from bunching and rupturing under the intense pressure common with off-road equipment.

4. HEAVY-DUTY RETAINER

Unlike spacers used by will-fitters, a leak-stopping spring resists vibrations to keep filter elements in place.

5. METAL END CAPS AND CENTRE TUBES

Cardboard components used by many competitive manufacturers are susceptible to breakdown from moisture.

6. RUBBER SEALS

Unlike cardboard seals that can deteriorate and leak, our rubber seals provide a tight, even seal that prevents unfiltered oil from re-entering your system.

7. RUGGED CONSTRUCTION

Case IH filters are routinely tested to meet rigorous quality standards.

DISC MOWERS/MOWER CONDITIONERS/WINDROWERS

BEARING & BUSHINGS KITS

WHEEL BEARING KIT

Application: DCX131, DCX161, DC132, DC162, SCX100 Mower Conditioner

- Kit includes bearing cups, cones, cap and hardware

SHOCK PROTECTION SYSTEM HUB KITS

Reduce Downtime and Lower Repair Costs with the New Shock Protection System Hub Kits

- The Shock Protection System Hub Kits are designed to provide shock protection to the individual cutter bar modules should the knives contact larger obstacles.
- The shock hub reduces the number of splines, which will shear off before failing of cutter bar gear teeth. It also provides protection for the top cap assembly.
- Retro fit kit includes a hub seal which prevents metal fines from entering module components and damaging them.
- Clamp loading on the shock hub drives the disc after shearing to prevent domino effect failures by allowing disc to partially re-time.
- Shock Protection System Hub Retro Fit Kits can be quickly and easily installed. Components and installation instructions are included in the retro fit kit, Part No. 87602273.
- Shock Protection System Hubs can be quickly and easily repaired. Components and installation instructions are included in the repair kit, Part No. 87580643.

SHOCK PROTECTION SYSTEM HUB RETRO FIT KIT

Includes components for two (2) modules.

Part No. 87602273

SHOCK PROTECTION SYSTEM HUB REPAIR KIT

Includes component to repair one Shock Protection System module.

ROUND BALERS

BELTING & ACCESSORIES

Standards a Cut Above the Competition

New Lower Profile 3-Ply
Continuous Chevron Design

Regular Profile 3-Ply
Continuous Chevron Design

Case IH RB and RBX Series Round Balers: New Lower 3-Ply Continuous Chevron Baler Belt Design

- Provides the perfect combination of positive yet gentle grip between crop and belts
- Exclusive lower profile Continuous Chevron design moves crop quickly to the baling chamber for fast and efficient bale starts
- Low profile textured surface releases crop during bale formation for minimal leaf loss
- Features a self-cleaning design for constant performance in the most difficult conditions
- High strength polyester/nylon construction provides the ideal combination of working tension, elongation (under load), and faster retention
- 3-Ply Low Profile Continuous Chevron Endless belts are also available for most RBX and RB Series models. Case IH belts are truly endless with the highest tension rating in the industry.

ROUND BALERS

BELTING & ACCESSORIES

Case IH Round Baler Belt Assemblies and Belt Accessories, Case IH RBX Series Round Balers, New Lower-Profile 3-Ply Continuous Chevron Baler Belt Design

CASE IH MODEL	DEPOT #	DESCRIPTION	DIRECT SHIP #
RBX 443	87056534	7" × 272.5" 3-Ply Low-Profile Chevron/Clipper	ZAH7700271
RB454	87056534	7" × 343" 3-Ply Low-Profile Chevron/Clipper	ZAH7700342
	87042211	7" × 343" 3-Ply Low-Profile Chevron/Rivet	ZAH7700345
		7" × 343" 3-Ply Low-Profile Chevron/Endless	ZAH7700344
RB464	87056535	7" × 420.5" 3-Ply Low-Profile Chevron/Clipper	ZAH7700419
	87042209	7" × 420.5" 3-Ply Low-Profile Chevron/Rivet	ZAH7700422
		7" × 420.5" 3-Ply Low-Profile Chevron/Endless	ZAH7700421

Technical Notes: The newer Low-Profile Continuous Chevron Belts are original equipment for all RBX "3 Series" Balers. This belt style is slightly less aggressive than the standard (taller) profile Continuous Chevron design belts installed on the older RBX Series balers. It is highly recommended that Low-Profile Continuous Chevron belts be installed on RBX "3 Series" balers.

KEEP THE UNEXPECTED FROM IMPACTING YOUR PRODUCTION.

Run your operation longer and stronger with a Shock Protection System Hub Kit. When your mower's blades come into contact with rocks, branches or other obstacles, the stress can damage your mower modules. These easy-to-install shock hubs minimize spline shear and eliminate cutter bar gear teeth failure if an obstacle is encountered. This cutting and baling season, Be Ready for the unexpected.

SHOCK PROTECTION SYSTEM HUB RETROFIT KIT

Part No. 87602273

The Shock Protection System Hub Retrofit Kit allows you to retrofit older-model mower conditioners. It includes a hub seal which prevents metal fines from entering module components and damaging them. Components and installation instructions are included for two modules.

Application: DCX91, DCX101, DCX131, DCX161, MDX71, MDX81, MDX91, RDX131, RDX161, RDX181

SHOCK PROTECTION SYSTEM HUB REPAIR KIT

Part No. 87580643

The Shock Protection System Hub Repair Kit makes in-field repairs fast and easy. Components and installation instructions are included for one module.

Application: All models except RD163, RD193

- High performance starting power
- High reserve capacity
- Maintenance accessible easy fill vents

FILTERS

THE SUPERIOR PROTECTION OF CASE IH FILTERS

A filter's purpose is to extend the life of your equipment by protecting it from harmful contaminants.

Lower-quality filters may save you some money at the counter, but their inferior protection can cost you greatly in the long run.

Case IH filters offer advanced design and durable construction that is rigorously tested by CNH Engineering the best heavy-duty protection for your equipment.

- Oil Filters
- Fuel Filters
- Hydraulic Filters
- Air Filters

A young boy in a white polo shirt is driving a red Case IH tractor in a park. Two other children are nearby, one on a swing and another on a different tractor. The background shows trees and a brick wall.

HOURS OF FUN FOR ALL THE KIDS

Case IH Toys, Ride-ons and Replicas - Collect or Play

A variety of Case IH toys and replicas are displayed on a brick wall. The collection includes several red tractors of different sizes, a yellow tractor, a red dump truck, a red semi-truck, and a white truck. A yellow bucket is also visible.
