

# BaleSkiis® Baler Liner

## • HOW DOES IT WORK?

The BaleSkiis Baler Liner covers the bale-forming chamber with a specially-designed, self-adjusting material. An anti-springback pattern machined into the product uniformly compresses the hay and keeps it compressed when the baler plunger retracts. This ensures a constant uniform movement and compression of hay through the bale chamber. The hay is not moving back and forth in the chamber breaking leaves off stems.

- Puts more high-protein leaves in the bale – not on the ground
- Puts more pounds per acre in the bale – not on the ground

Tests conducted by the Alberta Farm Machinery Research Center showed a 30% reduction in leaf loss!

## • HOW LONG DOES IT TAKE TO INSTALL?

It takes about two hours to install a complete kit in a small baler and a full day to install in a large baler. The kit comes complete with fasteners and installation instructions. You don't need to remove any of the baler's original parts.

## • HOW WILL IT HELP ME?

The BaleSkiis Baler Liner stabilizes friction, which reduces:

- The amount of tension in your bale chamber
- Horsepower and fuel consumption
- Knotter problems
- Wear, breakdowns and down time

The BaleSkiis Baler Liner makes uniform bales in weight, length, and density, so you can:

- Use less experienced help to run the baler
- Pick, transport, and stack equipment faster and more efficiently
- Reduce trucking and handling costs

This all adds up to a cost savings that eliminates frustration and increases your profits!

## BALESKIIS BENEFITS

- Get good smooth, solid, uniform bales
- Increase relative feed value and forage quality
- Reduce breakdowns and down time
- Put more profit in your haying operation
- Reduce leaf loss by 30%
- Use less fuel
- Increase protein

## WILL IT WORK IN MY CLIMATE AND WITH MY TYPE OF HAY?

Over the years users have included folks from Arizona to Alaska, and just about every other corner of the U.S. and Canada! The reasons they buy and use the BaleSkiis vary as much as their climates do. The varieties of hay and forage these folks are successfully baling with BaleSkiis is just as lengthy and includes:

- Alfalfa
- Bermuda
- Rye Grass
- Straw
- Timothy
- Sudan Grass
- Orchard Grass
- Pine Straw
- Corn Stalks

## HOW MUCH DOES IT COST?

That depends on the make and model of your baler. Patented BaleSkiis Baler Liners are made to fit any model square baler from small to large 4 × 4 × 8 balers.

Ask us about pricing for a BaleSkiis kit for your baler. Be sure to include the make and model. If you have an extension or other special requirements, let us know and we can have the BaleSkiis made to fit.

## FULL MONEY BACK GUARANTEE

If you're not happy with the BaleSkiis Baler Liner, you can return it for a full refund.

# WHAT OTHERS ARE SAYING ABOUT BALESKIIS

*"Pleased beyond expectations. Would recommend to anyone. Excellent quality product and quality service. Gained considerably on protein and gained 100 lbs. on our bales. Tractor and baler runs much easier."*

—Paul McKie, North Augusta, SC

*"Moisture is high in our rye straw and we had a problem with chaff building up. Would have to cut strings and dig stuff out. The liner has eliminated those problems. Now there's no buildup with the rye straw. It keeps the hay from getting back on the hay dogs and we don't run into problems with tying anymore. All that's been eliminated. Now we've got BaleSkiis in all six of our balers."*

—Randy Eldred, Auburn, NY

*"We are getting heavier bales with the liner than we were when we had installed all kinds of restrictors in the bale chamber and the equipment isn't working harder. I wouldn't have another baler without it."*

—Jack Clark, Choteau, MT

*"I purchased the baler new in 1997. I couldn't get over a 70 lb. bale even with three extra sets of wedges. The bale wagon wouldn't pick up a lot of them. I was having trouble with the knotters. I was ready to get rid of the baler until I installed the BaleSkiis. I removed three sets of wedges and reduced the hydraulic pressure by more than 100 lbs. I now get a good heavy bale with a lot less wear and tear on the equipment. The knotter problems went away. If I ever purchase another baler (new or used), the first thing I will do is put in a BaleSkiis liner."*

—Bob Walske, Shepherd, MT

**"Pleased beyond expectations. Would recommend to anyone."**

*"I like the uniformity of the bales and haying goes much faster. Even in very dry hay, I get good bales with 22% protein and increased RFV."*

—Karl Yoder, Blanchard, MI

*"I was extremely skeptical and thought, 'No add-on could transform an already good baler.' My baling season is over, approx. 5,000 bales, the BaleSkiis made my baler a great piece of machinery. I had fewer baler problems the entire season than I usually had in one day."*

—Dwight Nyquist, Stanwood, WA

*"Saw how they worked from a local guy who had them in two balers. After one season, I could see that it helps with all types of hay. Our bale size is very consistent now with a lot of hay packed into them. They're very firm bales. Before, we were always separating bales out and giving discounts on the small bales. This year there was very little difference in bale size. Makes me feel better when I take hay to a customer that every bale is the same and I can look them square in the eye and know I've given them good hay."*

—Richard Cook, Newport, ME
