

PUNCH – HOLL0006 LM625 Telehandler release

NEW HOLLAND'S NEW TELEHANDLER TAKES PERFORMANCE TO NEW HEIGHTS

The latest in the New Holland family of heavy duty telehandlers, the compact LM625 certainly lives up to New Holland's promise, "built around you", with a wide range of features that will make it the top choice for any business.

To start with, the LM625 offers a 84hp turbo engine which gives you the power boost you need whilst delivering considerable fuel savings. The LM625 also features a powerful, high-capacity hydraulic system that's ideal for multi-tasking, with a high flow gear pump that delivers 80 litres and 230 bar pressure. This reliable hydraulic system always provides the right flow and power - making movements smooth and very quick to deliver fast working cycles.

Smooth and powerful, and extremely easy to use, is the LM625's hydrostatic transmission. The hydrostatic pump and motor both automatically change displacement according to the torque demand, with no need to flip a switch to vary the pulling capacity, while the inching pedal lets you easily modulate the hydraulic flow for even smoother operation. Particularly valuable when slow movements are needed for lowering heavy loads at maximum reach, the system works like a standard clutch but with the advantages of a hydrostatic transmission.

And while the compact LM625 is an extremely efficient and hard worker, it's also easy on the operator as the spacious ROPS-FOPS cab offers the same high levels of comfort as New Holland's bigger models.

A standard, adjustable tilting steering column allows a full range of operator adjustments to achieve the best driving position for every individual. The proportional joystick is easy to use and guarantees high precision in material handling applications and fast response in digging operations and can also conveniently control the attachment quick coupler.

Additional features include: air conditioning, a suspension seat, easy-to-read dashboard and cab roof protection from a strong grid that extends to the front cab window.

Two best-in-category features complete the LM625's cab offering - the lowest in-cab noise levels and the best 360° visibility in the telehandler category with a low 1.9m height. With a rounded front profile and large glass area, the LM625's cab offers clear vision of the arm in every position and all-round vision when manoeuvring in restricted workspaces.

And as for maintenance – that's easy too. The LM625's engine compartment is easily accessible through the fully tilting hood to access daily checks.

All-in-all, the LM625 is all you could ask for in a compact, heavy duty telehandler. If you'd like to ask more about the LM625, contact your local New Holland dealer, call 1300 XCAVATE or visit www.newholland.com
