

STEYR INNOVATION HONOURED

STEYR Q-KMS camera on the STEYR Profi CVT distinguished with Demopark silver medal

St. Valentin, 29.03.2019

Also in 2019, the expert jury awarded medals to outstanding technology exhibited at Demopark. The STEYR cross-traffic monitor system was distinguished with a silver medal. The STEYR Q-KMS camera is used to eliminate restrictions of the field of vision caused by front dimensions which exceed 3.50 metres, or when implements are attached to the front linkage during road transport. The system also provides a perfect view into crossroads or at blind yard and street entrances.

In practice, the system offers numerous advantages. No conversion of the camera system is needed when attaching different implements. It is also possible to use the system in combination with a front loader. In addition, it is approved for use in summer and winter service by an appropriate certification of the German technical inspection association (TÜV). Both housing and camera are equipped with a temperature-controlled heating system for winter service.

This technical solution is offered ex-factory and fulfils the requirements regarding function, operation, image quality and display according to the recommendations of the official German traffic bulletin (Verkehrsblatt) 23/2018-108. The system consists of two cameras with a 70 degree opening angle, a control box and a monitor with a picture-in-picture display that is installed in the cabin in a user-friendly manner. The control box allows controlling the system via haptic feedback in the Multicontroller armrest. Additional cameras to monitor reversing, for example, can also be connected.

"We indeed are delighted about this award. It highlights once again that our innovations are developed from practice for practice, and also convince experts," says Jona Hormann, Key Account Manager Municipal/Forestry/Industry for STEYR Germany.

More information about STEYR tractors is available on the internet at www.steyr-traktoren.com.

STEYR has been synonymous with leading technology and high-quality machinery for more than 70 years. Its premium Austrian-built tractor range focuses on outstanding comfort and precision operation, using proven technical innovations to maximise productivity for operators in the agricultural, forestry and municipal sectors. STEYR customers are backed
